Bremen, xx. Reusable tableware is already gaining ground in the take-away business, but the environmentally friendly alternative can also offer numerous advantages in in-house catering and at closed events or for food trucks. Unlike conventional porcelain tableware, it is lightweight, unbreakable and can be stacked to save space. For sustainable consumption on site, greenbox offers the ideal reusable solution: reusable tableware products now complement the supplier's comprehensive Häppy Box reusable range. These are made of 98 per cent renewable raw materials, are visually appealing with a simple design and are ideal for serving versatile dishes. More information at www.biologischverpacken.de/en .

More and more caterers are looking for environmentally friendly alternatives. Although porcelain tableware is made from the natural resources kaolin, quartz and feldspar, it is not necessarily good for the environment: for one thing, it

cannot be recycled and sooner or later ends up in the rubbish. So, it's definitely worth thinking outside the box.

The "Happy Family" range consists of 40 percent wood from sustainable forestry and 60 percent organic PP, which is obtained e.g. from old cooking oils such as frying fat, among other things. This saves energy and emits less CO₂. Lightweight, heat- and cold-resistant, dishwasher-safe, antibacterial and resilient, environmentally friendly reusable tableware can more than keep up with conventional porcelain tableware.

Green covered and flexible to use

Reusable tableware is not only suitable for the out-of-home business. The new tableware solutions from greenbox GmbH bring the practical properties of reusable items to the restaurant and dining industry. The new tableware portfolio offers the right solution for every type of food: from small snack bowls for side dishes to bowls and dinner plates for main courses and salads. The reusable items from greenbox are also ideal for serving quick meals for consumption on site at events and festivals.

About greenbox

Since 2010, greenbox has been offering its customers from the food-service sector, the hotel industry, gastronomy, wholesale and food retail a diverse range of environmentally friendly packaging as disposable and reusable solutions as well as sustainable consumer products made from renewable or recycled raw materials. With over 1,000 different products, greenbox is the market leader in the field of CO₂-compensated foodservice packaging. With around 60 employees, greenbox aims to simplify the daily processes in the catering business with its products and to reduce the environmental impact of conventional plastic packaging. As the first supplier in the food service packaging sector, greenbox not only designs its operations, but also its products to be completely CO₂-compensated. Greenbox is a member of the BIONATIC Group, which offers environmentally friendly products and digital solutions for businesses and end customers in various business areas.
