UNDER CONSTRUCTION

It’s greenbox’ birthday!

SUSTAINABLE
All articles are 100% climate neutral
Since 10 years greenbox stands for sustainable food service packaging made from renewable and recycled raw materials. At the core of our product range are and remain articles made of renewable and biodegradable raw materials - to protect finite resources. More than ever, we consider active climate protection to be indispensable, and we will continue working for this with the greatest possible commitment in the future. Since August 2017, we have offset more than 11,000 tons of CO₂ through our previously supported project in the Kasigau Wildlife Corridor (Kenya, Africa). Our next project to be supported by us, is a reforestation in the southern Indian state of Tamil Nadu. We are the first and only provider of food service packaging who offset all CO₂ emissions: From the cultivation of the raw materials, through production, to the delivery to our customers.

Over the past 10 years, the food service market has undergone massive changes. One thing is certain: the challenges of the coming years will become increasingly greater, so the market will demand modern solutions. This is where we want to play our part.

We are going the extra mile

Reusable concepts have started to emerge in the to-go market. Under the label repEAT we have put together our first B2B reusable assortment. The HAPPY BOWL is one of the first reusable concepts we will be able to offer, e.g. for salads.

Extra mile with our new greenbox app, for example, we offer more service, allowing greenbox products to be reordered as quickly and conveniently as never before. Extra mile with our new online shop www.biologischverpacken.de offers more orientation. A new navigation and new filter options are just some of the many improvements we have developed for you. You will find more information and topics around gastronomy on our new company homepage www.greenbox.bio and our “greenblog” section.

So many new things - we are looking forward to receiving your feedback and we are thrilled to shape the market for sustainable food service packaging together.

Bionatic becomes greenbox

By the way: from now on, our wholesale activities will be located in a new company - the GREENBOX GmbH & Co. KG. The team, shop, location - everything remains as usual, only with even more greenbox features for you!

We are looking forward to the year 2020. Have fun with our new catalogue

Jörg Ziegler & the greenbox team

Do you have a question about your order, would you like to get more information about a product or would you like some advice? If so, you can reach us at:

+49 (0) 421 / 246 87 87 0

or by e-mail at contact@greenbox.bio.

You can also reach us conveniently via WhatsApp at +49 (0) 176 / 346 216 18.

Our opening hours are Monday to Thursday from 08:30 to 17:00. On Fridays you can contact us from 08:30 to 16:00.

We are happy to answer all your calls, mails and messages!

We go HÄPPY: reduce, reuse, repeat

In addition to our organic reusable cutlery, we also supplement the greenbox range from 2020 with our reusable HÄPPY Bowl for fresh salads and unpacked food. The HÄPPY Bowl is the long-lasting alternative to our popular round, brown 1000ml cardboard tray. On both bowls will fit the same transparent rPET lid.

Organic reusable cutlery

Our HÄPPY reusable organic cutlery is shaped so that it lies well in hand and has a pleasant mouth feeling. With our own tools the cutlery is produced in Germany by injection moulding. Furthermore we have participated in developing the material of the cutlery. It is a composite of wood sawdust and bio-plastic which is made of 80% renewable raw materials. The utilized wood comes from residual materials of sustainable forestry. This is how we reduce waste of raw materials according to the principle - waste to value.

Organic Reusable Bowl

The HÄPPY Bowl is a reusable bowl, ideal for fresh salads or other unpacked food offers. To Go or Inhouse. The HÄPPY Bowl is dishwasher safe and easy to clean. The material is 98% bio-based and a share of 40% is replenished with wood sawdust from sustainable forestry. As a result to this, we further reduce the use of fossil plastics and our product obtains a special natural character. The bowl can be closed with a transparent rPET lid made of recycled PET.
Biodegradable

I am oil-free

individually printable

WONDERFULLY RECYCLABLE

greenbox© cups for cold drinks are made from 100 percent bio-plastic (PLA). Our hot drinks cups are coated on the inside with PLA.

PLA is totally biodegradable. Another benefit: the cardboard cups coated with bio-plastic can be recycled like waste paper.

They are custom printed according to your wishes. Just give us a call. We’d be happy to advise you.

WASTE CAN BE SO BEAUTIFUL

We use waste to create beautiful and functional tableware. For our Palmware®, we use fallen palm leaves from areca palm trees (not oil palms!). This waste material is pressed and carefully refined to create uncoated, robust plates and bowls with a unique texture.

Our sugar cane tableware is also made from waste material. Waste sugar cane fibres are produced during sugar production, which are then processed into a pulp and pressed into shape. The result is water-resistant and oil-repellent tableware made from.

100 percent waste fibres. Nothing else! You won’t find any better looking, more eco-friendly products.

Wood, bamboo and plant starch are renewable raw materials that form the basis of our knives, spoons, forks, ice cream spoons and chip forks. Our CPLA cutlery is particularly robust. The crystallised bioplastic PLA is also very temperature resistant.

If you prefer something totally natural, go for wooden cutlery. Made from certified sustainable forestry and without any additives. The coating is also free from petrol-based plastics.

High-quality take-away food needs outstanding packaging. Our products don’t just complement your goods visually, they are also incredibly functional. Whether it’s made from PLA, cardboard, bamboo, rPET or sugar cane, our packaging protects its contents, is practical, sustainable and looks great. Your customers can use it to enjoy their take-away food.

It’s simply bio-logical!

**Variation 1:** PLA combo lids and cups

**Variation 2:** PLA-insert cups

**Perfect combination:** With our cup combinations you can separate yoghurt from granola or salad from dressing. So if it’s meant to be crispy, it stays crispy.

To that, we say: absolutely yes! Our block bottom bags have an integrated clipband that can’t go missing. It’s quick and easy: simply roll, close and it’s ready to sell. Totally easy, fast and practical.

We also offer a sustainable solution for wrapping paper. Both the paper and bio-foil are compostable. The palm leaf design wrapping paper is really eye-catching.

Our snack bags keep your goods fresh for longer. The clever packaging ensures that the contents can be consumed easily and without mess.

READY TO CARRY

If your customer has forgotten their shopping bag, you can offer them an eco-friendly alternative. The paper for our carrier bags comes from sustainably managed forests. The T-shirt bags are made from the bio-plastic Mater-Bi©, which is manufactured from plant starch and plant oil.

Our lunch boxes are really practical. Made from strong craft board folded and coated with organic wax, they are perfect for holding cold and hot food.

Areca palms grow in Southeast Asia and they lose four to seven of their two meter long leaves each year of their growth. The fallen leaves are gathered up and sorted according to quality. Only high-quality leaves are processed. They are pressed into the desired shapes using high pressure and heat. One leaf sheaf is enough to make two to three medium sized plates or bowls.

During photosynthesis, maize absorbs CO2 and stores it in the form of starches. Lactic acid bacteria turn this plant starch into long chains of carbon polymers (polylactic acid/PLA). The polylactic acid (PLA) is made into a granulate that can be processed like plastic. And this is made into our greenbox food service packaging.

The plants are pressed to squeeze out the juice or sugar and the fibrous remnants of the plant are left over. This is mixed with water and natural binding agents to form a thick pulp. It is dried until only a small level of residual moisture remains, then shaped into the desired forms using hydraulic pressure and heat.

Used PET bottles are collected and sorted, cleaned and processed into small flakes. These flakes are turned into rPET film, which is used for our bottleBOX packaging.
We are the first and only provider of food service packaging who offset all CO2 emissions – from the cultivation of raw materials to the delivery of our products to you. This means that you receive 100% climate-neutral articles from us!

For this purpose we work on our carbon management together with recognized experts of ClimatePartner. This includes the collection, calculation and compensation of both our packaging and company organization. You can see here how much CO2 we compensate exactly.

Climate neutrality through afforestation.

After the successful support of the climate project in the Kasigau Wildlife Corridor (Kenya, Africa) we now support a reforestation in Tamil Nadu (India), the state of where our palmware origin. Thanks to the „International Small Group and Tree Planting Program“ (TIST) small farmers can escape from poverty and at the same time protect the climate by planting trees. These absorb from a certain age CO2 and serve at the same time as a source of income through the sale of the harvested nuts and fruits such as mango or guava.

What is better than a reliable producer? One who treats its employees fairly. With the brothers Kumar and their palm leaf company MEC, we have found such a partner! Regulated working hours, above average remuneration, paid holidays and health insurance are not standard in India, but at Magnus part of the company philosophy. With regard to occupational safety, regular training courses and fire drills are held. A free kindergarten, working clothes, specially prepared food as well as free transport to work round off the excellent job offer. Our highlight: Every employee’s child receives a teak tree, which will be harvested after 15 years to pay for the continued education.

All the best from India. We hope you enjoy our Palmware®.
Our palmware products come from the state of Tamil Nadu in the south of India. The two brothers Satheesh (42) and Nandha (40) grew up here. They studied mechanical engineering and textile technology and worked as project engineers in the automotive sector and as production managers in a textile factory.

Both wanted to change careers and run a business that would enable them to differentiate themselves from the usual industries. Their passion for nature and the environment and the appeal of facing a challenge gave rise to the idea of processing local palm leaves. In 2003 the brothers started in a small room, only with one self made machine. There the foundation stone for “Magnus Eco Concept” was laid – a success story with now over 170 employees.

What is your favorite product from your range?

Satheesh: The Oval Drop Design is close to my heart.

Nandha: I love the Canopies and Dip designs.

What makes you proud regarding the development of Magnus?

Satheesh: As a regular employee I could only support my family. Through the company I can now support 170 families. We also select the best practices in the industry so that our products are always of high quality.

Nandha: We are proud that our own products reaches a person who is thousand miles away from us.

What is the first thing that comes to your mind, when you think of Germany?

Satheesh: Our friends Robert Czichos, Michael Brink, Bremen and Bionatic greenbox. Furthermore, new technologies and high quality products come to my mind.

Nandha: In earlier days I always thought of new technologies, Steffi Graf and Michael Schumacher. Now it is obviously our partnership with Bionatic greenbox and the cities Bremen and Hamburg.

Do you have a personal „wisdom“ or „motto“ regarding your daily work?

Satheesh: Yes, I want to be happy and make others happy. For me, this happens through eight hours of successful and productive collaboration, during which all the stresses and strains are left behind ... at least in the office.

Nandha: My personal motto is to make everyone work with passion and not for targets which I believe will bring happiness to both personal and professional life.
Not only greenbox celebrates its anniversary. This year aveato will also be 20 years old. The catering company has come a long way. What began in 1999 as a small sandwich bar in Berlin Mitte has grown into a successful business caterer in eight German cities. And rightly so. The vision of the two founders Alexander Schad and Kaspar Althaus was clear from the very beginning: "We make hosts happy."

The impulse for this came from the realization that the perceived host is always the organizer himself and not the caterer. aveato supports hosts in the best possible way. This vision became the recipe for success, which earned the company the award “Caterer of the Year 2017” and many other prizes.

aveato sets in terms of environmentally friendly entrepreneurship. Already since 2008, aveato has been delivering its food throughout Germany in a climate-neutral manner at no extra charge. This also includes using greenbox’s climate-neutral food service packaging for all disposable items. The Palmware® tray, one of our top sellers, was even created in joint development.

“We attach great importance to sustainable food, packaging, delivery and a sustainable way of working. For over 10 years greenbox has been supplying us with great products that meet our high standards. We are currently working together again on new, even more environmentally friendly packaging to make our contribution to climate protection.

Andrea Krier, Marketing Director of aveato.

@cateringservice.aveato
@aveato_catering
**TERMS AND DEFINITIONS**

**Bagasse**: Fibrous waste from sugar production. This is the by-product created when sugar cane is pressed.

**Barrier**: To protect food or products from oxygen and moisture, or products that have volatile flavours, films and coatings that provide good oxygen and aroma barriers are used.

**Bio-coating**: Coating made from bio-plastics or renewable raw materials (e.g. wax), generally biodegradable (compostable).

**Bio-plastics**: Plastics made from renewable raw materials, generally also biodegradable (compostable). See also plastics.

**BSCI**: The Business Social Compliance Initiative (BSCI) is a leading supply chain management system that supports companies in achieving social compliance and making improvements in the factories and farms of their global supply chain.

**Cellulose**: The main component in plant cell walls. The cellulose molecules clump together to make more complex structures. Cellulose is the raw material used in the production of paper, cardboard and paperboard.

**Cellulose**: The main component in plant cell walls. The cellulose molecules clump together to make more complex structures. Cellulose is the raw material used in the production of paper, cardboard and paperboard.

**Dual system (DSD)**: System for collecting and using packaging waste in Germany. Companies that are license holders (eg. InterSeroh) under the Dual System collect, recycle, dispose of and market waste material. Every distribu- tor of filled packaging is obliged to sign a contract with one of these license holders and to pay them a license fee depending on the amount (weight) of packaging they put onto the market.

**Fair Trade**: Form of direct cooperation between buyers (processors) and producers (farmers). Direct supply con-tracts ensure that higher prices are paid to the producer, improving both living standards and working conditions in cultivation regions.

**FSI**: The Forest Stewardship Council was established in 1993 following the environmental summit in Rio. The FSC is a non-governmental, non-profit organisation that pro-motes socially-responsible, eco-friendly and economically sustainable use of the world's forests.

**Ingeo**: Bio-plastic brand of the US company NatureWorks, which manufactures a range of bio-plastics from starch using its own technology. NatureWorks is the largest manu- facturer of PLA granulates in the world and its research and development drives innovation.

**Migration**: The biological process whereby organic material is broken down by microorganisms. We distinguish between industrial composting processes and home composting with longer composting times.

**Composting**: The biological process whereby organic material is broken down by microorganisms. We distinguish between industrial composting processes and home composting with longer composting times.

**Co-product**: A co-product is usually a product created by a primary manufacturing or transformation process. Sugar cane bagasse is a co-product as it is the raw material resul-ting from the manufacture of sugar.

**Plastic**: Plastic describes materials that are mainly compri-se of macromolecules. The macromolecules in plastic are polymers. For example, the polymer polypropylene (PP) is made up of repeated propylene units. The polymers can be derived from natural substances or can be purely synthet-ic. Semi-synthetic plastics are made by modifying natural polymers (mainly cellulose into celluloid), while other bio-based plastics, such as polyactic acid or polyhydroxybuty-ric acid, are made from fermenting sugar or starch.

**BSCI**: Bio-plastics from the company Novamont, Italy. Family of bio-plastics made from starch, plant oils or compostable petrol-based polymers and combinations of these substances.

**Migration**: (Harmful) substances migrate from packaging into the foods due to their solubility. Our products are made from natural raw materials as much as possible. We place great importance on our products being free from harmful substances.

**Palm leaf**: Large leaf sheaths from areca palm trees (betal-nut trees, up to 25m tall) are used for producing palm leaf products.

**PLA (polylactic acid)**: Lactic acid molecule chains that are formed in the biological process of lactic acid bacteria acting on starch (or sugar). PLA is therefore a renewable, completely bio-based and biodegradable bio-plastic. The carbon in the plastic is formed from the CO2 that the plant stored as starch as it grew.

**Polypropylene (PP), polyethylene (PE), poly(styrol (PS)**: Thermoplastic plastics made by the polymerisation of cru-de oil. These plastics are generally not biodegradable, but can be partly recycled.

**PSM (plant starch material)**: Family of bio-plastics made from 40-70% starch, plant oils or compostable petrol-based polymers and combinations of these substances.

**Recycled PET (rPET)**: PET turned into a new product after being thrown away. We can protect the environment by recycling bottles.

**Recycling paper**: To reduce the consumption of wood, energy and water, paper and cardboard is reused and made into eco-friendly recycled paper and cardboard.

**Vinçotte OK biobased certified**: Vinçotte is an internation-ally certified (accredited) Belgian testing organisation, like the German TÜV. The tests, e.g. composting, are conduc-ted according to graded classifications, so they are given ratings such as ‘OK compost’ or ‘OK biobased’.

**Unsaturated fatty acids**: Chemical substances that are used on a large scale to make plastics, rubber etc. softer, more flexible and more plastic. They are often very soluble, so they can get into food etc. We don’t use any plasticisers in the produc-tion of our organic disposable products.

**Vinçotte**: Belgian non-governmental organization that tests and certifies products according to European standards. The Vinçotte OK Biobased Certification is part of this system.
Terms and conditions
Information about delivery costs and times, payment methods and our partners can be viewed on biologischverpacken.de.

Copyright
All text, photos and graphics are protected by copyright. Use or reproduction is not permitted without written permission from Bionatic GmbH & Co. KG.

Brands
greenbox, Palmware, EcoUp, bottlebox, greenbox, Gutes Gewissen To Go Happy Bowl und repEAT are registered trademarks. INGEO is a protected trademark of the company NatureWorks, USA. MATER-BI is a protected trademark of the company Novamont, Italy.

Printing
This catalogue is manufactured in a resource-saving and climate-neutral way with organic printing ink on recycled paper.

Deliveries are
Mo. – Th. 08:30 – 17:00 h
Fr. 08:30 – 16:00 h

Issue: March 2020

ANNIVERSARY
10 YEARS
greenbox
Eco Up Packaging
It’s greenbox’ birthday!

Last but not least

We go HÄPPY
